

## MA3203 - Exercise sheet 11

1. Let  $\Lambda$  be a ring and let  $f : M \rightarrow N$  and  $g : N \rightarrow L$  be essential epimorphisms of  $\Lambda$ -modules. Show that  $g \circ f : M \rightarrow L$  is an essential epimorphism.
2. [1, Exercise III.9ab] Find the radical and the top of each of the following

representations of the quiver  $1 \xrightarrow{\quad} 2 \xrightarrow{\quad} 3$ .

$$(a) \quad k \begin{array}{c} \xrightarrow{1} \\ \xrightarrow{1} \\ \xrightarrow{0} \end{array} k \begin{array}{c} \xrightarrow{0} \\ \xrightarrow{1} \\ \xrightarrow{1} \end{array} k$$

$$(b) \quad k \begin{array}{c} \xrightarrow{0} \\ \xrightarrow{0} \\ \xrightarrow{1} \end{array} k \begin{array}{c} \xrightarrow{1} \\ \xrightarrow{1} \\ \xrightarrow{1} \end{array} k$$

$$(c) \quad k \begin{array}{c} \xrightarrow{1} \\ \xrightarrow{1} \\ \xrightarrow{1} \end{array} k \begin{array}{c} \xrightarrow{1} \\ \xrightarrow{1} \\ \xrightarrow{1} \end{array} k$$

3. Let  $\Lambda$  be a left artinian ring, let  $f : M \rightarrow N$  be an essential epimorphism between finitely generated modules, and let  $h : M \rightarrow M$  be a morphism such that  $f \circ h = f$ . Show that  $h$  is an isomorphism.
4. Let  $\Lambda$  be a ring. We say that  $\Lambda$  is *local* if it has a unique maximal left ideal. Show that the following are equivalent
  - (a)  $\Lambda$  is local
  - (b) The top of  $\Lambda$  is simple;
  - (c) The non-invertible elements of  $\Lambda$  form an ideal;
  - (d)  $\Lambda$  has a unique maximal right ideal.
