

MA3408 Week 3

Drew Heard (drew.k.heard@ntnu.no)

January 22, 2021

Question 1.

Use Whitehead's theorem to show that a CW complex is contractible if it is the union of an increasing sequence of sub-complexes $X_1 \subseteq X_2 \subseteq \dots$ such that each inclusion $X_i \rightarrow X_{i+1}$ is null-homotopic.

Question 2.

Use cellular approximation to show that the n -skeletons of homotopy equivalent CW-complexes without cells of dimension $n + 1$ are also homotopy equivalent.

Question 3.

Let $f: X \rightarrow Y$ be a weak homotopy equivalence. Assuming X is a CW-complex, and Y has the homotopy type of a CW-complex, show that f is a homotopy equivalence.
