TMA4115, Spring 2013, Test 2

Exercise group number:

Name:

NTNU username:_____@stud.ntnu.no

You have 20 minutes to solve the 3 problems. Each problem is worth 10 points, and you need at least 15 points to pass the test. Your answers must be written on this sheet of paper (you can use additional sheets if you need more space for your answers). You are allowed to use a Citizen SR-270X or Hewlett Packard HP30S calculator, and Rottman's "Matematisk formelsamling", but no books or notes.

Problem 1 Check that $z_1 = i$ is a zero of the polynomial $P(z) = z^4 - 4z^3 + 14z^2 - 4z + 13$ and find the 3 other zeros of P.

Problem 2 Find a fundamental set of solutions for the differential equation $y'' - 4y' + 4y = 0$.

Problem 3 Find the solution of the initial value problem $y'' - 4y' + 13y = 0$, $y(0) = 0$, $y'(0) = 3$.
