

**Complex analysis, Residue calculus.**

*Problem 1.* Let  $f(z) = z(z + \bar{z})$ .

- Write  $f(z)$  in the form  $u(x, y) + iv(x, y)$  where  $z = x + iy$  and  $u$  and  $v$  are real-valued functions.
- Find all point on the complex plane where  $f$  is differentiable and compute  $f'$  at those points.
- For each of the functions  $u(x, y)$  and  $v(x, y)$  determine if it is harmonic (on the whole complex plane) or not. Justify your answer.

*Problem 2.* Let  $g(z) = \overline{f(\bar{z})}$ .

- If  $f(z) = e^{(1+i)z}$ , find  $g(z)$ .
- Suppose that  $f(x + iy) = u(x, y) + iv(x, y)$ , where  $u$  and  $v$  are real-valued. Find the real and imaginary parts of  $g(x + iy)$ . Show that if  $f(z)$  is analytic at  $z_0$  then  $g(z)$  is analytic at  $\bar{z}_0$ .

*Problem 3.* Let  $u(x, y) = x^3 + axy^2$ . Determine the value of  $a$  for which  $u$  is harmonic and for this  $a$  find a harmonic function  $v(x, y)$  such that  $f(x + iy) = u(x, y) + iv(x, y)$  is analytic.

*Problem 4.* a) Find all complex numbers  $z$  such that  $e^z = -1$ .

- Show that  $|e^z| \leq e^{|z|}$  for any complex number  $z$ . For which  $z$  there is equality?

*Problem 5.* Find the image of the region  $\{z : \operatorname{Re}(z) > 0\}$  under the mapping  $w = \operatorname{Ln}z$ .

*Problem 6.* Let  $f(z) = \frac{z+2}{z^3-1}$  and  $C_R$  be the circle  $\{|z| = R\}$ .

- Find all singular points and residues of the function  $f(z)$ . Compute the integral  $\int_{C_2} f(z)dz$  using residues.
- Use the *LM*-inequality to show that

$$\left| \int_{C_R} f(z)dz \right| \leq \frac{2\pi R(R+2)}{R^3-1}.$$

Let  $R \rightarrow \infty$  and show that  $\int_{C_2} f(z)dz = 0$ .

*Problem 7.* Let  $f(z) = \frac{z}{z^2+1}$ .

- Find the Taylor series of  $f(z) = \frac{z}{z^2+1}$  at  $z_0 = 0$ .
- Find the Taylor series of the function  $f'(z)$  at  $z_0 = 0$ . What is the radius of convergence of this series?
- Find all Laurent series of  $f$  centered at  $z_1 = 1$ .

*Problem 8.* Let  $f(z) = \frac{z}{1-e^z}$ .

- Determine all singular points of  $f$  and classify them (removable singularities, poles, essential singularities).
- Let  $C = \{|z - 1| = 8\}$ . Compute  $\oint_C f(z)dz$

*Problem 9.* Let  $C$  be a simple closed curve on the complex plane and

$$g(a) = \oint_C \frac{z^3 + z^2 - 3}{(z - a)^3} dz.$$

Show that  $g(z) = 0$  when  $a$  is outside  $C$  and  $g(a) = 2\pi i(3a + 1)$  when  $a$  is inside  $C$ .

*Problem 10.* Evaluate the following integrals using residues:

$$a) \int_0^\pi \frac{d\theta}{(2 + \cos \theta)^2}, \quad b) \int_{-\infty}^\infty \frac{x^4}{x^6 + 4} dx, \quad c) \int_0^\infty \frac{x \sin x}{x^4 + 1} dx.$$
