- Normalfordelinga

# Repetisjon

## Kontinuerleg sannsynsfordeling

Funksjonen  $f(x)$  er ei sannsynsfordeling (sannsynstettleik) for den kontinuerlege stokastiske variabelen  $X$ , definert på  $\mathbb{R}^+$ , dersom

1.  $f(x) \geq 0$  for alle  $x$
2.  $\int_{-\infty}^{\infty} f(x)dx = 1$
3.  $P(a < X < b) = \int_a^b f(x)dx$

## Kumulativ fordeling

Den kumulative fordelinga til ein kontinuerleg stokastisk variabel  $X$ , med sannsynsfordeling  $f(x)$ , er

$$F(x) = P(X \leq x) = \int_{-\infty}^x f(t)dt \quad -\infty < x < \infty.$$

# Uniform fordelinga

## Definisjon

Sannsynstettleiken til ein kontinuerleg uniform stokastisk variabel  $X$  på intervallet  $[A, B]$  er:

$$f(x; A, B) = \begin{cases} \frac{1}{B-A} & A \leq x \leq B \\ 0 & \text{ellers} \end{cases}.$$

## Forventningsverdi og varians

Forventningsverdien og variansen til ein kontinuerleg uniform stokastisk variabel  $X$  er

$$E(X) = \frac{A + B}{2} \quad Var(X) = \frac{(B - A)^2}{12}.$$

# Normalfordelinga I

## Definisjon

Sannsynstettleiken til ein normalfordelt stokastisk variabel  $X$  med forventningsverdi  $\mu$  og varians  $\sigma^2$  er

$$f(x; \mu, \sigma) = n(x; \mu, \sigma) = \frac{1}{\sqrt{2\pi}\sigma} e^{-\frac{1}{2\sigma^2}(x-\mu)^2} \quad -\infty < x < \infty.$$

# Normalfordelinga II

## Egenskapar til $n(x; \mu, \sigma)$

1. Mode for  $x = \mu$
2. Kurva er symmetrisk om  $x = \mu$
3.  $\mu$  er tyngdepunktet til fordelinga ( $E(X) = \mu$ )
4. Kurva har vendepunkt for  $x = \mu \pm \sigma$ : den er konkav ned for  $\mu - \sigma < x < \mu + \sigma$  og konkav opp elles
5.  $\lim_{x \rightarrow \pm\infty} n(x; \mu, \sigma) = 0$
6. Arealet under kurva er 1

# Normalfordelinga III

# Normalfordelinga IV

## Samanheng $n(\mu, \sigma)$ og $n(0, 1)$

- Anta  $X$  har fordeling  $n(x; \mu, \sigma)$
- Då er  $Z = \frac{x-\mu}{\sigma}$  standard normalfordelt  $n(z; 0, 1)$

$$\begin{aligned} P(x_1 < X < x_2) &= P\left(\frac{x_1 - \mu}{\sigma} < Z < \frac{x_2 - \mu}{\sigma}\right) \\ &= F\left(\frac{x_2 - \mu}{\sigma}\right) - F\left(\frac{x_1 - \mu}{\sigma}\right) \end{aligned}$$

# Normalfordelinga V
